

PORT-A-COOL®

PORTABLE EVAPORATIVE COOLING UNITS

A perfect choice for areas that are impractical, ineffective or cost-prohibitive to cool with a conventional air conditioner!

PORT-A-COOL units are designed for a variety of uses including:

- animal confinement (swine, poultry, dairy, equine)
- greenhouse and garden centres (retail, shipping and packaging areas)
- industrial/commercial buildings
- garages/service bays
- produce storage
- riding arenas
- outdoor cooling (tents, patios, etc.)

PORT-A-COOL is a portable evaporative cooling unit that utilizes a unique, patented design. It simply works by pulling hot ambient air through water-saturated evaporative cooling media. The evaporation process takes place within the cooling media, creating cool air that is dispersed by a fan located in the front of the unit. PORT-A-COOL units lower the temperature of the air by up to 10°C or 18°F and disperse that air over a large square foot area. Using only tap water and 110V power source, these units operate for literally pennies a day. PORT-A-COOL units are completely portable, easy to operate, easy to clean, easy to maintain and available in four sizes to fit any cooling need.
